

Memo

date: September 17, 2009

to: RSC, A. Rusek, M. Sivertz, I-H. Chiang, T. Shrey

from: D. Beavis 

subject: Operatorless Controlled Access at NSRL

The system to allow trained users to enter the NSRL target room without operator intervention was demonstrated to a group of about 20 people. The system was demonstrated with the single person entry, multiple person entry, tail gating, entry with a cart, and several means to try to cheat the system. The system performed as designed. The system will be released for general use as soon as a few minor documentation details are verified as acceptable.
