Scheduling Meeting

Minutes

In time order:

1. APEX is scheduled for this Wednesday 3/11 starting at 8 am till 11 pm followed by an hour to return to Physics. This will include the 56 MHz studies.
2. E-Lens MD will take place after the canonical 8-hr store. This will be done on as needed basis with acquiescence from the experiments.
3. PHENIX will need two accesses of ≥ 1 Hr duration to the IR and tunnel. This is not urgent and will be done when the opportunity arises.
4. Both experiments are reporting lower analyzing powers recorded in the ZDC polarimeters compared to the current p-Carbon and jet data and PHENIX published neutron asymmetries. Off line data analyses continue and will revisit this (with potential special fills) at a later date.
