

BLIP Operations

March 11-24, 2013

- Routine production of Sr-82 and Ge-68 at 117 MeV continued. Smooth operation, no problems.
 - Average beam current was 95.0 μ A.
 - Average beam on time was 156.5 hr/wk which includes scheduled Linac maintenance. Average downtime was 4.9hr/wk.
- Attempted 6 hour experiment at 200 MeV has been postponed until Linac is ready.

Accumulated uA-hrs
