

AGS/Booster Status

Haixin Huang

March 25, 2014
Time Meeting

Status

- Siemens: use maintenance day to diagnose. No definite date for the expert to come yet.
- AGS pp setup behind RHIC store: postpone by one week to April 7. Waiting for longer RHIC store time, and cold snake won't be ready before then.
- The AGS Au transfer efficiency is greatly improved this run (Reduced early losses and baby bunch intensity). Last Friday, the RHIC store bunch intensity reached the target value of 1.4×10^9 for a few stores (AGS: $1.8-1.9 \times 10^9$; RHIC injection: $1.6-1.7 \times 10^9$).
- NRO and NSRL runs start today. They will run till middle of May.
