April 8, 2014  
Time Meeting

# Status

- Siemens switch was successful. After some tuning, no issue with the transfer efficiency in the AGS.
- AGS cold snake test is ongoing today. Need 8-12 hours behind RHIC store(s). No AGS beam activity during this work.
- AGS and Booster pp setup: starting today if NSRL run finish early enough.
- NSRL runs protons today and tomorrow.
- For the low intensity store requested by STAR, we need to spend time in injector to prepare the beam before Thursday.
