Time Meeting

# Status

- Continue to provide Au beam for RHIC operation and NSRL.
- AGS cold snake test is done last Friday and is ready for use. The helium consumption seen in past a few years is fixed and cryo system behaves well.
- AGS and Booster pp setup: started last Thursday.
- We use the no snake machine to set up instrumentations such as tunemeter, polarimeter and vertical damper.
- Ready to turn on cold snake today.
- Switch between Au and proton in the injector chain is improving. We will soon start to use tape sequencer to do the switch (turn on/off gas leak of IPM and cold/warm snake; move polarimeter home for Au user..)
