

AGS/Booster Status

Haixin Huang

June 17, 2014
Time Meeting

Status

- Switch to He3-Au operation mode yesterday.
- NSRL beam from Tandem this week. NSRL program is done by Saturday.
- Switch between He3 and Au is currently under 10 minutes. It will be quicker, down to about 5 minutes.
- Develop Pb ion beam in the Booster/AGS before the end of the run, likely behind RHIC stores. There are strong interests from RHIC physics retreat.

Switch between He3 and Au Last Night
