

BLIP/TPL Update

- **Safety** – No issues
- **Production**
 - *no Sr-82 processing,*
 - *one Sr-82 shipment to GE;*
 - *Rb processing for future delivery (in progress)*
 - *RbCl target in beam on 9 March for 3.9 week irradiation (beam off next Sunday), some issues with RbCl target heating (burned spot on the second RbCl target) – Yesterday, reduced administrative beam current limit on the target from 115 to 90 microamps for duration of the run.*
- **R&D in past week**
 - Ac-225 project:
 - Thorium irradiation at 200 MeV, 10 days (20-30 Mar)
 - Concurrent with Sr-82 production run
 - Targets (three foils) pulled from beam yesterday, will be shipped in about a week to ORNL for processing
 - Core R&D: platinum foil irradiation concurrent with thorium (short)
