

RHIC - DCCT total beam & WCM bunched beam

- 1. Coherence and emittance blow up: resolved, no changes for ramp and lattice any more**
- 2. Intensity limit: 2.3E9 (planned to increase it after Landau cavity modification this week)**
- 3. Beta* Squeeze MD: would like to have another 2 hours (last?)**
- 4. 56 MHz MD: benefit longitudinal bunch length (0.7 kV) without collision and with halved protection bump, would like to make it operational from this week's MD**
