Minutes of the AGS Radiation Safety Committee

Friday, December 21, 1990

Present: D. Beavis, G. Bennett, A. Etkin, C. Flood, J.W. Glenn, P. Ingrassia

Subjects: (1) RSO Duties/Training; (2) Feed Forward Procedure; (3) Small Beams

Discussion of draft AGS OPM 6.1.5, "Residual Radiation Surveys by RSO", continued with reconsideration of multiple tasks. It was agreed that if the estimated time for any task is limited to 10 minutes or less because of high dose rate, the authorization of the OC is required for the RSO to control more than one task at a time. The prerequisites will also stipulate that the workers performing the repair are to have a high degree of proficiency about the task. To survey accurately the work area may require the presence of the radiation worker, which may be authorized by the OC. A separate checklist is to be used for each task. The checklists are to be posted in the HP log, to provide for frequent review by Health Physics. Changes in the checklist were discussed and will be incorporated. It was emphasized that the maximum duration is to be calculated to assure the dose does not exceed the limit.

It was recommended that the AGS Department review the effectiveness of having AGS personnel conduct these surveys, with regard to radiation safety and economics (ACT-005, tracked by E. Lessard and G. Bennett).

The Committee will reconvene on Wednesday, December 26, to continue the agenda.
