Minutes of the AGS Radiation Safety Committee

Wednesday, December 26, 1990

Present: D. Beavis, G. Bennett, A. Etkin, C. Flood, J.W. Glenn, S. Musolino

Subjects: (1) RSO Duties/Training; (2) Feed Forward Procedure; (3) Small Beams

Discussion of draft AGS OPM 6.1.5, "Residual Radiation Surveys...", concluded with minor revisions to the checklist. Review of draft AGS OPM 6.1.6, "Pulsed Radiation Surveys...", included the suggestions that the RSO wear an alarming dosimeter set with a safety margin to compensate for neutron insensitivity, elimination of the procedure to "note hot spots en route", comparison of chipmunk scaler and chipmunk meter readings to the survey meter reading for at least a factor of 2 agreement, reduction of beam intensity to maintain a maximum dose rate of 100 mrem/hr.

Revised copies of 6.1.5 and 6.1.6 will be distributed to the Committee for final review, with written comments to be returned by Friday, January 4, 1991.
